Hiring Team

Western Digital

Senior Test Software Engineer, Manufacturing Engineering

Dear Hiring Team,

Last year, my team replaced a company's SAP/Navision ERP with a system I architected and built from scratch — database to frontend to deployment — for a palm oil refinery in Sabah. Not a prototype, not a pilot: production software that a government-linked refinery runs on, for supply chain, finance, HR, procurement, and manufacturing execution. That is the kind of problem I want to help solve for Western Digital in its manufacturing test-software environment.

I bring an evidence-backed software engineering foundation relevant to this role. My enterprise .NET experience includes extending **Microsoft Dynamics AX** with custom plugins for financial workflows on SQL Server. I keep the C# sharp today through a publicly released mod with **526 automated tests**, 0 warnings, and its own installer and release pipeline. I also ship Nuxt 3 / Vue 3 / TypeScript / Prisma systems and run a live **real-time trading pipeline** using Python, FastAPI and machine learning. These experiences support disciplined debugging, testability, version control and production reliability.

One thing my resume doesn't say loudly enough: I audit my own work. When my trading backtest looked profitable for two weeks, I found the leak, published the audit, and rebuilt. I lead teams, wear the BA/PM/Architect hats when needed, and I ship systems that survive contact with reality — because **if it doesn't work for real people, it doesn't ship**.

I am based in Balik Pulau, Penang. My strongest direct experience is application software and systems integration rather than PLC programming or Visual C++/Visual Basic, but I am comfortable learning adjacent technologies and working with manufacturing and engineering teams to investigate issues and improve production systems.

Thank you for your time and consideration.

Warm regards,

Mohamad Firdaus bin Mohamad Fauzi
